SUPERIOR WILL SHOWCASE NEWEST CRUSHING TECHNOLOGY AT MINEXPO

Morris, Minn. – Superior Industries, Inc., a US-based manufacturer and global supplier of bulk material processing and handling systems, will display its latest crushing technology at MINExpo International in addition to new solutions for its screening, washing, and conveying products. Here's a preview of the products that will be displayed in booth #12731 – located in West Hall.

Endeavor® Cone Crusher

The SS400 model offers outstanding performance with its floating shaft design, which uses a single cylinder to maintain consistent closed side settings and ensures efficient crushing operations. Its universal chamber provides flexibility for various applications, from coarse to fine crushing, while the integral countershaft housing eliminates the need for maintaining a countershaft box seal, improving durability and reducing maintenance. Additionally, the SS400 model features a spiral bevel gear set, which minimizes vibration and noise, enhancing overall operational stability.

High Performance Conveyor Idlers

In addition to highly-engineered, custom conveying equipment, the vertically-integrated Superior Industries designs and manufactures its own line of conveyor idlers and pulleys. The booth display at MINExpo International will include a series of CEMA E and F rated idlers. These high performance rolls and frames are designed for heavy-duty applications, offering exceptional durability, reduced maintenance, and smooth operation to ensure efficient and reliable performance in demanding environments.

Mine Duty Impact Cradle

Superior's impact cradle features a curved design that eliminates the space between the belt and the bed, providing additional support to prevent tears and other impact damage. The cradle includes urethane segments that absorb shock and dissipate contact energy, while its modular design, fitting into existing idler mounting footprints, ensures easy installation and maintenance. Replaceable impact bars can be quickly slid off the side of the frame, reducing downtime and operational costs.

About Superior Industries, Inc.

A privately-owned American engineering and manufacturing company, Superior Industries supplies the metals mining sector with custom crushing, screening, washing, and conveying solutions. Specialties include individually-designed material processing and handling systems, heap leach conveyor packages, and heavy mining conveyor idlers and pulleys all designed and built for extreme durability at major, intermediate, and junior mining operations worldwide. Equipped with one million square feet of manufacturing space, Superior is headquartered in Morris, Minnesota, with four additional production facilities in the United States, plus international manufacturing locations in Canada, Brazil and Asia.
